

Push Notification Setup

To Begin, open the ICRSS Pro App and select the top left icon (menu) to bring up the menu for the app. Select the Alarm Manager Icon

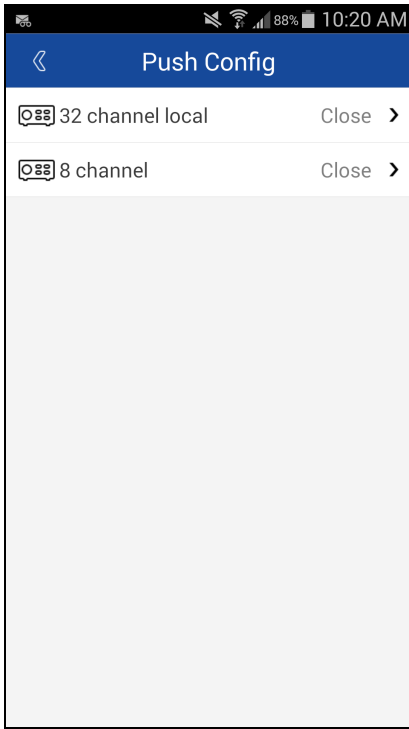

Tap on the Push Config to select this option

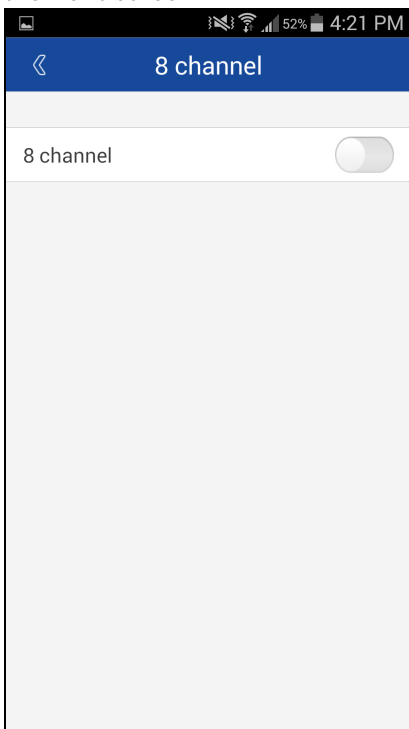

On this screen you can see the status for the Push Notifications per device on this page. “Close” indicates the Push Notification is not currently active. Tap on the device you want to enable.

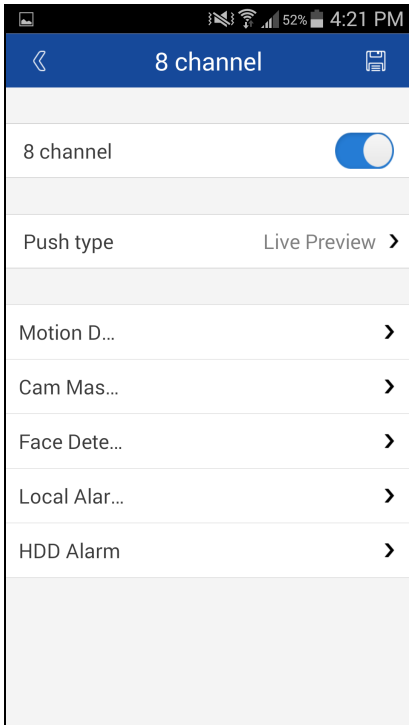

Please note if you have you can only have one push active per device, if you have in your setup a local IP login labeled “Home” and a remote IP login labeled “Away” then select the “away” device to enable the push notifications on that device.

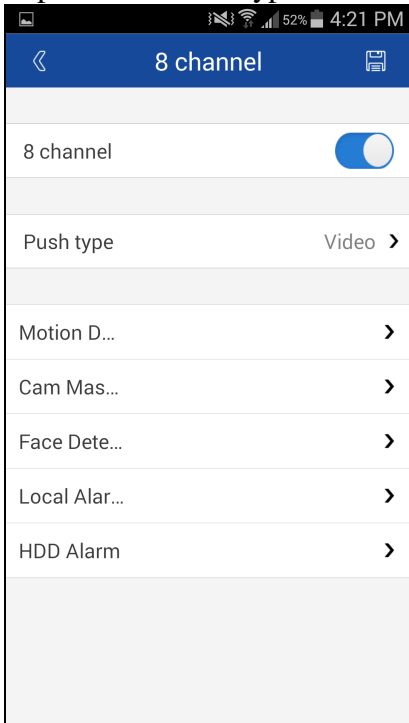

Tap on the toggle switch to enable the push notification for this device and to move onto the next screen

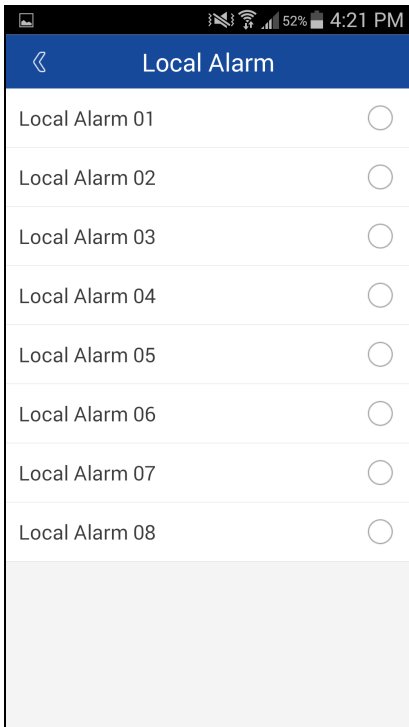

This is the starting screen for the push notification

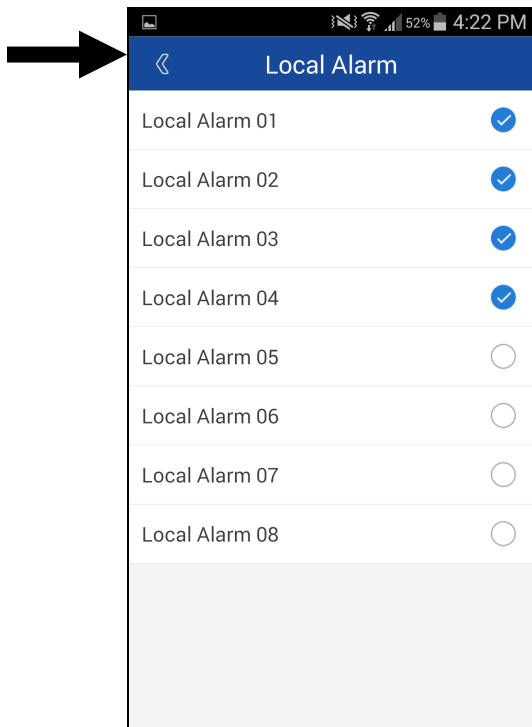

Tap on the "Push Type" selection and select Video as the Push Type

Tap on the Local Alarm to make your selections for which local alarms should be active. The wiring for the alarms should match up to which cameras you are wanting a push notification from when the Dakota alarm triggers a event to the DVR

Once the correct alarm inputs are selected then use the top left "<" arrow key to slide back one screen to save the settings

Tap on the top right icon to save the Push Notifications , you should get a message from the app of “OK” or “Subscribe Successful” . To leave the Push Config screen tap the “<” icon, then tap the top left menu icon and select Live Preview on the menu.
